

How To-Guide

Initial Prognosis – New Articles

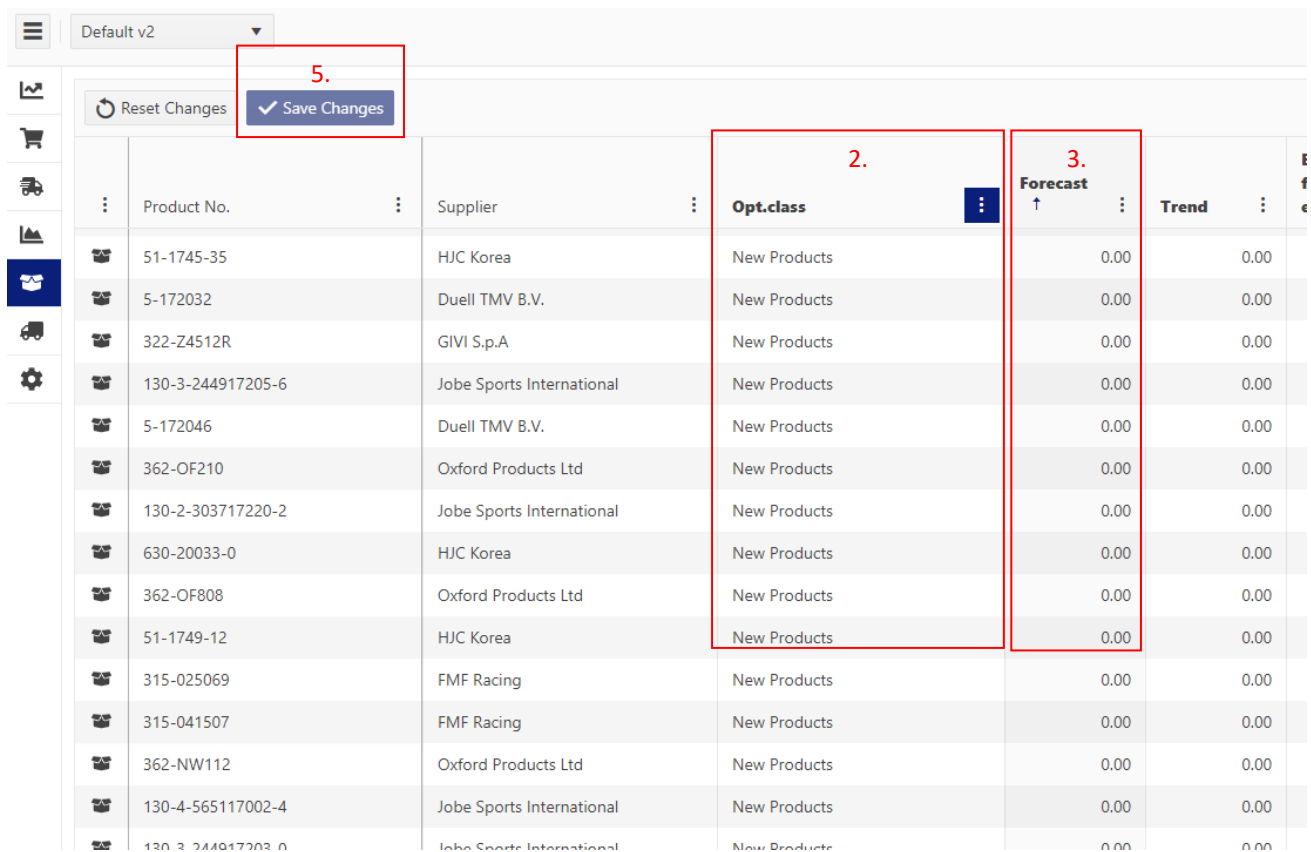

SOLO Web

New articles imported to SOLO from your Business System will not per default have a prognosis added to them, this needs to initially be administrated by you.

1. Menu: Articles
2. Filter on Opt. Class – *New Articles* as well as on relevant inventory if you have several.
3. Sort the **Prognosis Column** by clicking the title to view all zero prognosis at the top.
4. Amend the Prognosis on topical articles.
5. **Save** the changes.

Please note.

If you as per routine buy initial volumes of new items, the demand will automatically generate a forecast in SOLO over time. However, this may take a few periods and therefore it might be appropriate, if you do not buy a volume that lasts for at least a couple of 4 weeks periods, to add a manual forecast on these as well.
