

How-To Guide Create Season SOLO App

- 1. Menu: Register Season Codes
- 2. Create new season
- 3. Name the season
- 4. Save

- 5. FIll in your Forecast Index.
 - 1. For an easy overview of which dates your seasons periods considers click the plus sign next to the season.
 - 2. It is important that a prognosis increase/decrease from one period to the next is not too big. As a reference the difference in a value from one period to another should not go from more than 0,1–0,3 between one period and the next.
 - 3. The field for Demand is also adjustable and works the same way as the Demand Field though has a bigger effect on an articles prognosis. We recommend that you consult with you contact at PromoSoft before altering.

Note

It is important that the sum of all values entered on a season must sum up to the same value as the number of cells that you have used. If you have periods with no index (value 0) those should be excluded from the total.

For example: you have 9 periods which contains a value, and 4 that does not - as per below.

This means that the sum of all values entered in the season should add up to 9. Please see below in yellow.
